13 APRIL 2022 – WEBEX

1

TIPS Directory: the interim solution adopted since the TIPS go-live

2

TIPS adaptations to CRDM for T2-T2S Consolidation

3

Facilitating the onboarding of Swedish krona in TIPS

- The technical connectivity solution that ESMIG^{TIPS} provided since the TIPS go-live did not cover the full scope of technical connectivity services that ESMIG will provide in the T2-T2S Consolidation context in 2022.
- This includes the A2A connectivity towards the fully-fledged CRDM (based on the store and forward service), which will only be available with the go-live of T2-T2S Consolidation.
- The only possibility to provide an A2A connection to CRDM^{TIPS} in 2018 was to convey the related A2A traffic through the same channel that TIPS Actors will use for sending instant payment messages and local reference data updates to TIPS, by using the instant message service.
- Although generated in CRDM, the TIPS Directory is delivered each day in push mode by TIPS to all its participants that have created the relevant Report Configuration.
- The flat file is encapsulated in a XML envelope and sent in store and forward mode.

- With the go-live of T2-T2S Consolidation, ESMIG will be further enhanced, covering the full scope of technical connectivity services.
- As a consequence, starting from November 2022, the fully-fledged CRDM will generate both a full version and a delta version of the **TIPS Directory** and send it to TIPS Actors who subscribed it.
- The same will apply for **CLM repository** and **RTGS Directory**. CLM and RTGS Participants will receive such reports directly from CRDM every business day at 17:00 CET, if properly configured.
- In May 2022, TIPS will onboard the Swedish Krona. Considering the above, it would imply an undesirable situation for Sveriges Riksbank and its community as they will be required to manage an interim period (May – Nov) where the TIPS Directory will be conveyed by TIPS, and to start receiving it from CRDM at a later stage, when the relevant A2A channel will be available as part of the T2-T2S Consolidation project.

- For the above-mentioned reasoning, the TIPS-CG is invited to take note that:
 - To allow the Swedish banks to proper access the Service from the start, the A2A connectivity towards the fully-fledged CRDM will be anticipated by the NSPs already in May 2022 for the delivery of the **TIPS Directory in SEK**.
 - As already planned in 2018, all the remaining TIPS Actors (i.e. the euro community) will receive the **TIPS Directory in EUR** through the newly introduced channel, via CRDM Data Exchange Protocol (DEP) protocol, as of November 2022.

Thank you for the attention!
