# Developments in the FX swap market – MMSR perspective

MMCG Milan, 13 June 2017

# Is the FX swap market efficient?

Element	Expected behaviour	Assessment
Volume	How active is the market	?
Liquidity	Is there a local bias	?
Price	Does pricing depend on who you are and with whom you trade	?
Volatility	Is there "undue" volatiliy	?
Arbitrage and resilience	Does the market adapt to shocks and does it quickly restart	?

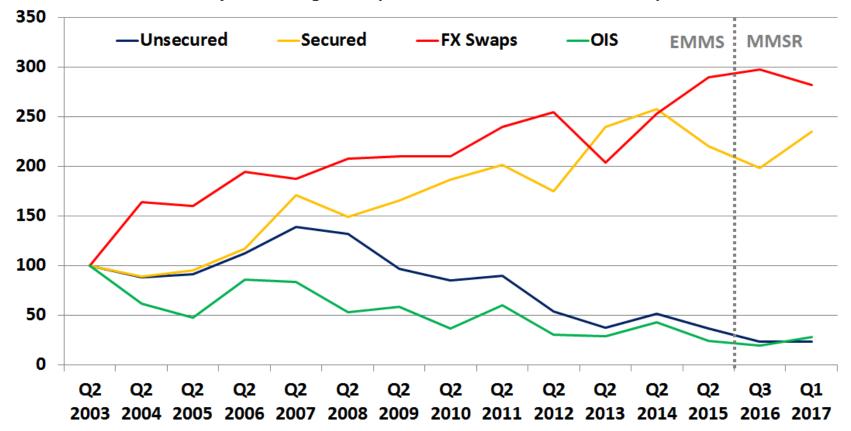

## Outline of the presentation

- 1 Is the FX swap market active? Does it exhibit a local bias?
- 2 Is pricing segmented?
- Was year-end dysfunctional?

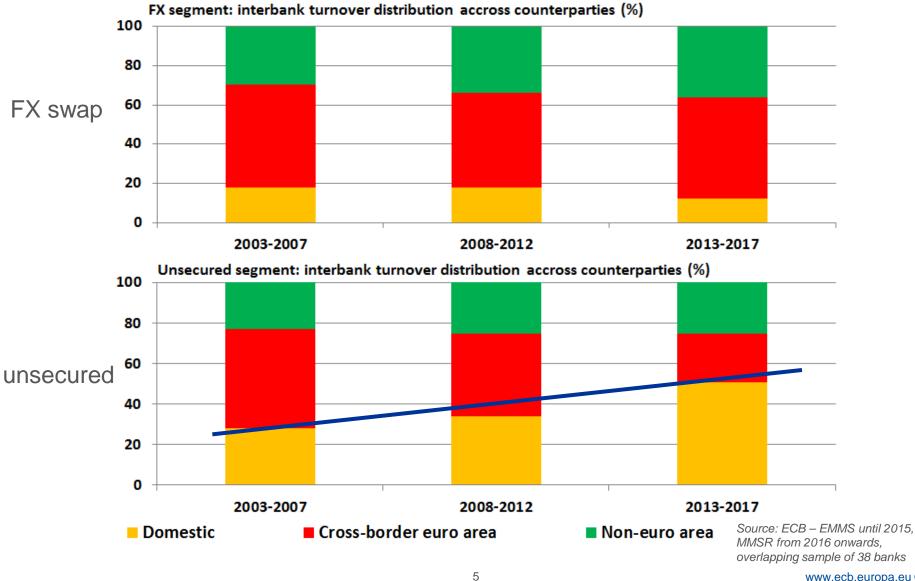

#### Is the FX swap affected by the local bias?

 The FX swap turnover rose continuously despite the crisis

Turnover in various money market segments (index: total volume in 2003 = 100)

#### No local bias in contrast to unsecured market

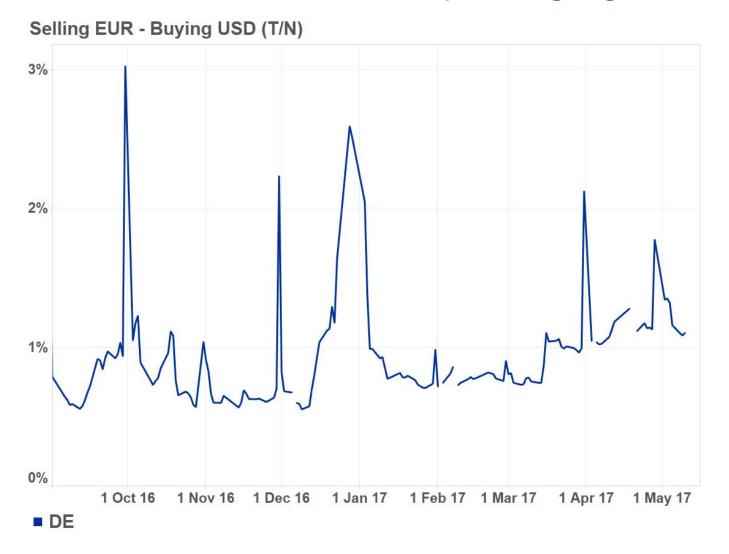

## Outline of the presentation

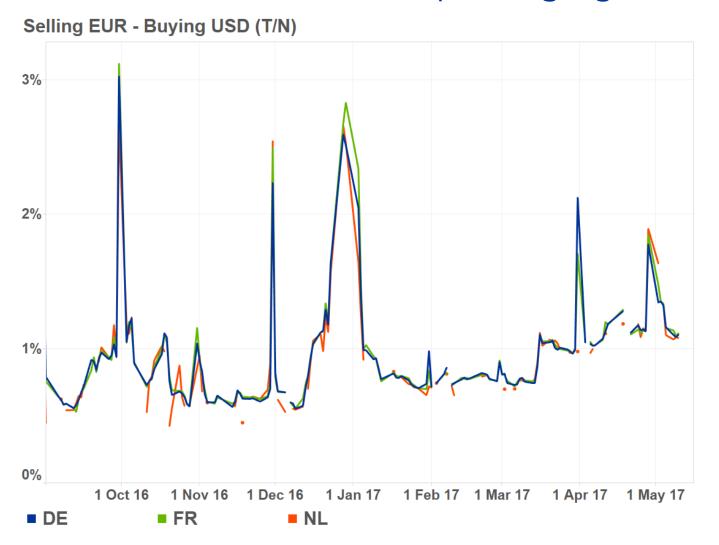

- 1 Is the FX swap market active? Does it exhibit a local bias?
- 2 Is pricing segmented?
- Was year-end dysfunctional?

#### Is pricing segmented?

 Implied USD rates: no price difference linked to the location of MMSR reporting agents

 Implied USD rates: no price difference linked to the location of MMSR reporting agents

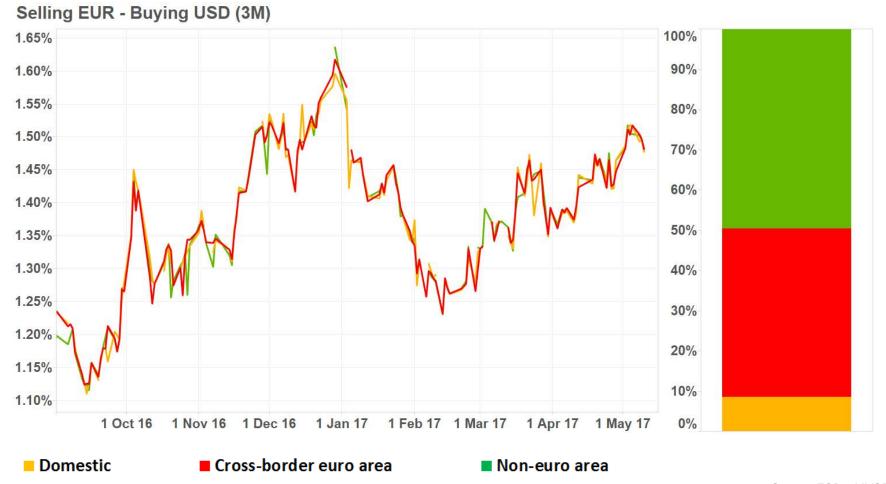

#### Is pricing segmented?

 Implied USD rates: no price difference linked to the location of MMSR reporting agents

#### Is pricing segmented?

 No pricing segmentation when reporting agents trade with non-euro area counterparties

## Outline of the presentation

- 1 Is the FX swap market active? Does it exhibit a local bias?
- 2 Is pricing segmented?
- **3** Was year-end dysfunctional?

#### Was year-end dysfunctional?

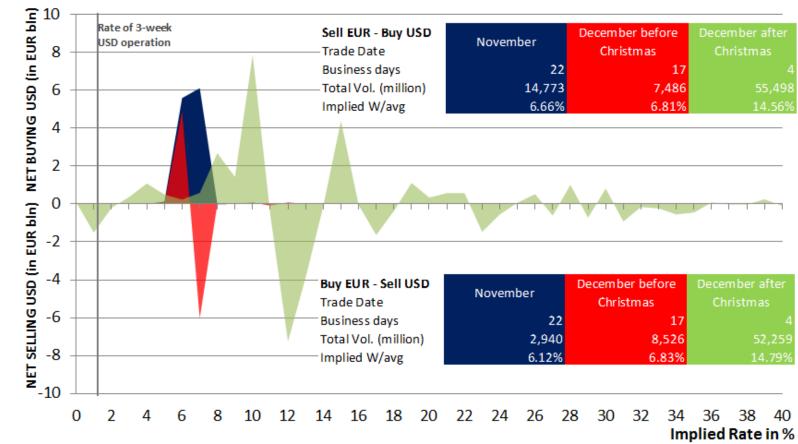

Was pricing so extreme?
Regulations already imply that the cost of extending balance sheet over year-end is elevated

	Germany	Austria
Bank Levy	0.06%	0.11%
Return on Equity (RoE)	7.2%	7.2%
Length of year-end in days	4	4
Year-end USD O/N rate	0.55%	0.55%
Implied cost with Bank Levy	6%	10.5%
Implied cost with Leverage Ratio of 3%	20%	20%

#### Was year-end dysfunctional?

 Headlines: USD implied rates of 40% but on small amounts as banks have pre-funded in November, and earned the spread

FX Swap EUR vs USD Net Activity by period & rate, Settlement Date 30/12/2016, Maturity Date 03/01/2017

#### Was year-end dysfunctional?

Was market so dysfunctional after all...?

- (1) Implied rates not so extreme compared to cost of balance sheet lengthening implied by bank levies or leverage ratio (6% to 20%);
- (2) Despite falling volumes, two-way activity remains;
- (3) Institutional frictions make arbitrage less obvious: difficult to get approvals to trade around year-end once balance sheet usage is frozen;
- (4) March quarter-end much smoother suggests banks adapted (comparable to secured market).

=> FX remained functional, even if volatility was observed and arbitrage limited

# Is the FX swap market efficient?

Element	Expected behaviour	Assessment
Volume	Stable or growing volume	
Liquidity	No sign for local bias	
Price	Homogenous pricing	
Volatility	Presence of volatility on some dates	
Arbitrage and resilience	Year end: market remained functional and is adapting to new regime	

## Annex

#### From EMMS to MMSR – broad evidence

## Methodology

#### Euro money Market Survey:

150 banks across the EU

Aggregated turnover and maturity information only

Segments: unsecured, secured, FX swaps, OIS, FRAs, Interest Rate

**Swaps** 

Since 2003, interrupted in 2015

#### Money Market Statistical Reporting

52 largest euro area banks

Transactional data: counterparty details, rate, trade, settlement and

maturity dates, collateral ISIN and amount, haircuts

Segments: unsecured, secured, FX swaps, OIS

No publications yet

Long time series based on 38 banks common to both data samples
