SSP V11 Qualified Configurations for Credit institutions and Ancillary systems

June 2017

In the tables below you can find two columns where system components qualified by the 3CB and valid for SSP release V11 are mentioned. Each column has to be read as a configuration set, i.e. no cross columns combinations are supported.

Customers using totally or partially different system components or versions than the ones mentioned here are responsible to verify the compatibility between their components and the ones listed in the table below in the test environment. In such case the 3CB can provide no technical support in case of problems.
These lists will be updated at every TARGET2 release.[a]

1. ICM

1.1. Internet Access

	System components and relevant versions for Internet Access	
Java Runtime Environment (JRE)	1.8.0_31 or higher, only needed for customers using Internet Explorer
